

This report shows changes in pursued curricula for a given cohort of fall new freshmen. It follows students who began in each major, describes the percentage of those who remained in it three years later, the percentage of those who remained in it who were still enrolled three years later, and, among those who dropped it, the top 12 curricula being pursued. Rows are sorted by college (highest gross drops at the top) and by major within college (highest gross drops at the top). Within each row, the destination majors are sorted by decreasing frequency. Students pursuing multiple majors at the end of three years are listed in destination cells with underscores separating the majors.

We track major-switching behavior through students' first three years because there tend to be few changes after that point. Depending on starting cohort, approximately 4%-7% of students switch majors by the end of their first year, 20-25% switch majors by the end of their second year, and 30%-40% switch by the end of their third year. Clearly it is important to wait three years, because some students wait that long to change. Using three years balances the goals of capturing as much switching as possible while also keeping the time frame as short as possible to allow for the inclusion of the most recent cohorts.

Example of how to read this report using the Fall 2000 cohort of new freshmen (pg. 2):

- * One hundred sixty students had a major of LAUD in their first term. Of those 160, 81% had dropped that major through the spring of their third year. However, some of the students who had not officially dropped the major were also no longer enrolled at LMU. Among the 160 who were still enrolled in the spring of their third year (actual number not displayed), 92% had dropped the major. Among those who dropped the major, the most common destination major was ENGL with 18 students. Sixteen students ended up in CMST, 11 ended up in PSYC, and so on. The destination majors are the majors students had in their last term of enrollment through three years.

Strengths of this report:

- * Quickly see where students who began as one major end up.
- * Compare within-major retention.

Limitations of this report:

- * Only majors dropped by at least one student during the time period are included.
- * This report does not track intermediary changes in curriculum. IR finds that only 6% of students switch more than one time and, thus, accounting for intermediary changes would result in a much more complicated report that adds little value.
- * Destination majors do not distinguish between people who started with multiple majors and dropped one and people who switched from one major to another. For example, if one student started with a double major in BADM and PSYC and then dropped BADM, the result in the table would be the same as another student who started with a single major in BADM and switched to PSYC. In both cases the score for PSYC would be incremented by 1, even though one student dropped a major and another substituted one major for another. IR does not feel this ambiguity causes any fundamental problem in interpretation because double majors are rare in the fall term of freshman year.
- * Some large starting "majors" such as the undeclared naturally have more than 12 destination majors and thus do not show up completely on the table. Unabridged tables are available on request.
